END. DAR.

Target:
4508 – 0010

Viewer: Daz
Method: CRV
Monday, 05 May 2008

The target feels:

Like a warm location which is made of flat land which has a lot of life which feels on the move, leaving things behind, like a migration or exodus.

This seems to be caused by a natural event from below the land that forced upwards.

Land

Solid, dry, warm, brown, grainy, layered, spacious and open.

This is pushed and expanded from below.

Bubbles, bubbling pressure, rising upwards, intense heat and pressure, pierces and disrupts the land. This displaces the land layers.

Life:

'A tide of people'. They seem to be grey and dirty/messy. Not happy and despondent. They seem to be moving in one direction, leaving 'it behind them', travelling a great distance.

AOL's of:

Spectacle, running, Quake, Fear, death event, exodus, volcano.
