

Below are 999 possible target assignments for the Climate RV Study being conducted by The Farsight Institute in 2008. Which target assignment is chosen for the study is determined by the last three integer digits of the closing Dow Jones average for Wednesday, 4 June 2008. For example, if the Dow Jones average for that day closes at, say, 12,345.67, then the target assignment would be #345, and you would find this assignment in the list below. In each assignment list, there are 24 associations between sessions and targets. The session number comes first, and the target number follows.
