BOMB
TEST.

3.45PM END 😊 DAZ.

Target 2705-0001

| | |
|----------------|--|
| Remote Viewer: | Daz Smith |
| Method: | CRV |
| Protocol: | BLIND – I had no information on this target other than the number |
| Date: | 27 May 2010 |

The primary components of the target is:

Land
Object
Energy/motion

The land is:

Thick, deep, moist, brown and mushy.
The land is wide and natural. It raised to a small peak then goes back down.
The land has small life like insects and animals upon/in it.
The land also has vegetation and clusters of trees.
The location of the land feels remote, cool to cold – with lots of moisture.

There is an object which is:

Cold, hard and grey.
This feels like its rotating and has very small bits particles) that beak away/off from it.
This object feels like it is moving in a driect, strong, natural and propelled way.

The movement is:

A first movement is:

Linear, arced but fairly linear

The second movement is:

Explosive/ energetic.
Sudden and swift.
There is a radiating movement – outwards (from the object) in all directions.
This rolls and pushes through the landscape like a wave of energy.
A 'whoosh' sound can be heard with this.

This movement feels fast and powerful.
